

Online Food Delivery System – UML Diagrams Report

Aim: To design the UML diagrams (Class Diagram, Use Case Diagram, and Activity Diagram) for an Online Food Delivery System.

System Description:

An online food delivery platform allows customers to browse restaurants, view menus, place food orders, make online payments, and track delivery status. Restaurants manage menus and update order status, while delivery agents accept delivery requests and update delivery progress.

Figure 1: Class Diagram

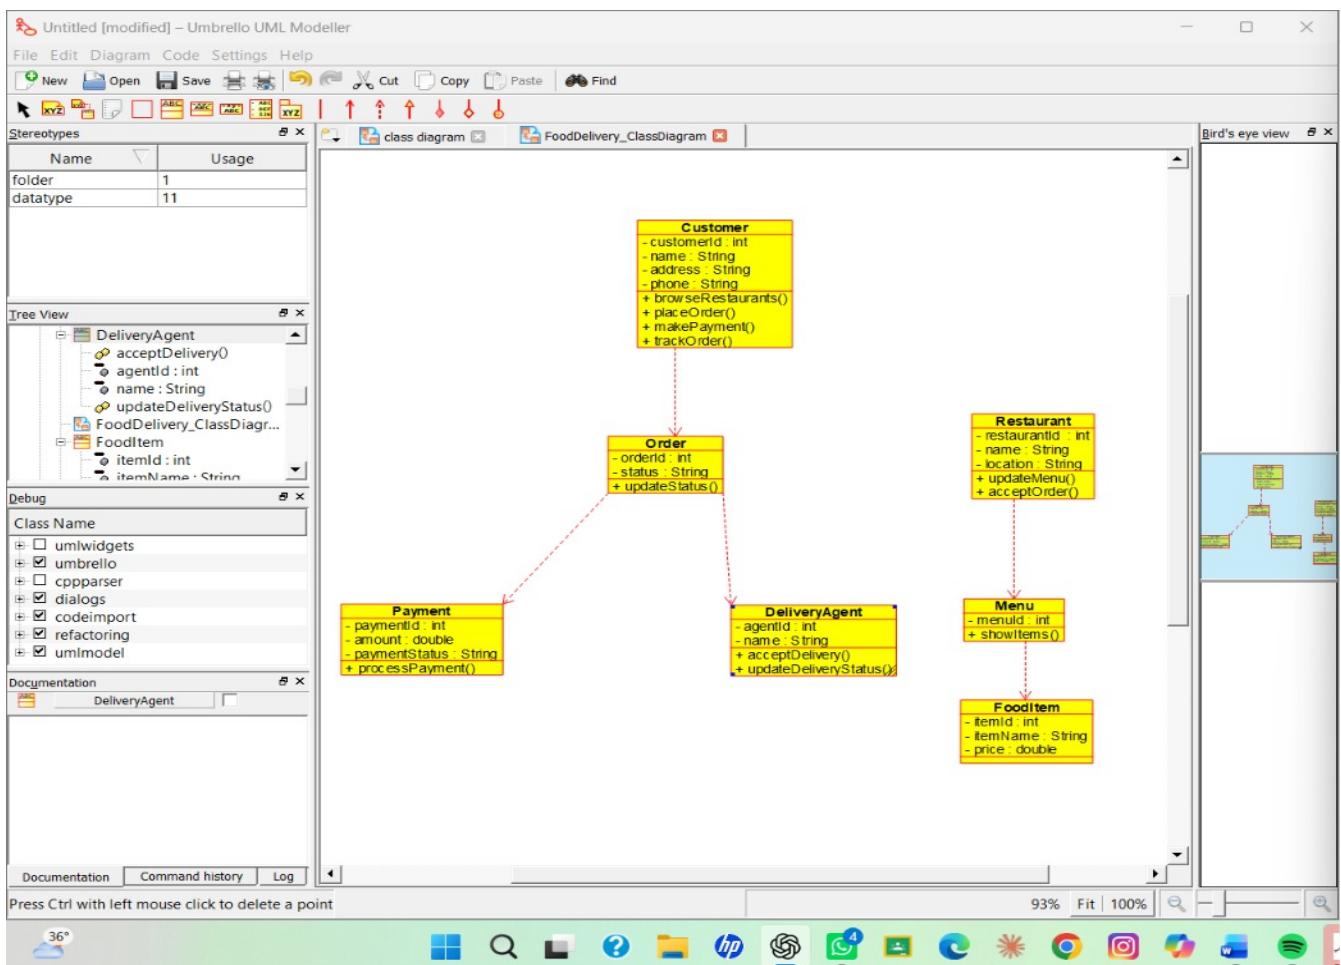

Figure 2: Use Case Diagram

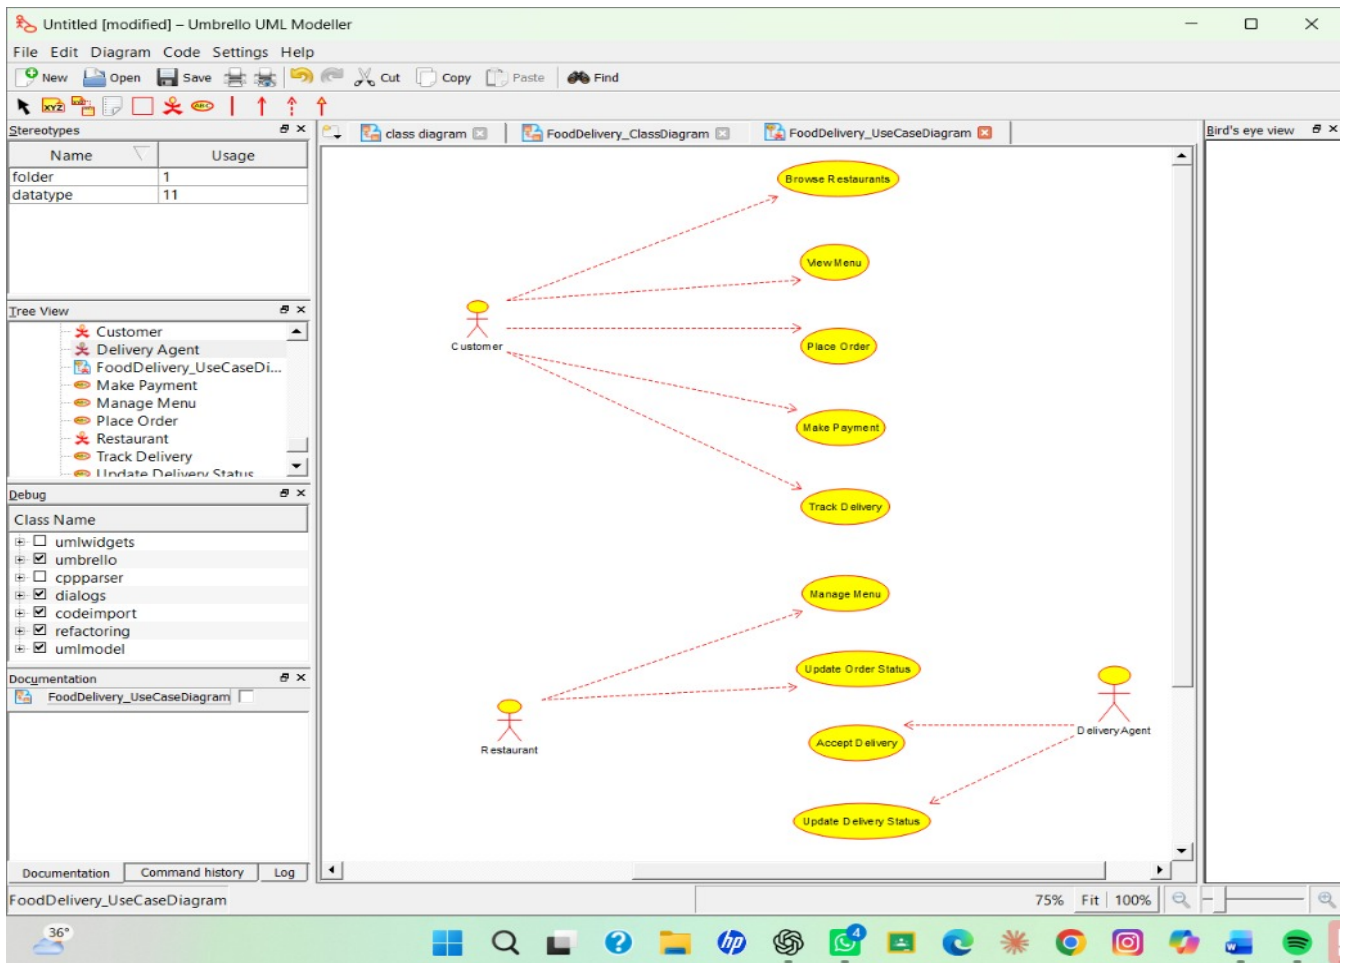

Figure 3: Activity Diagram

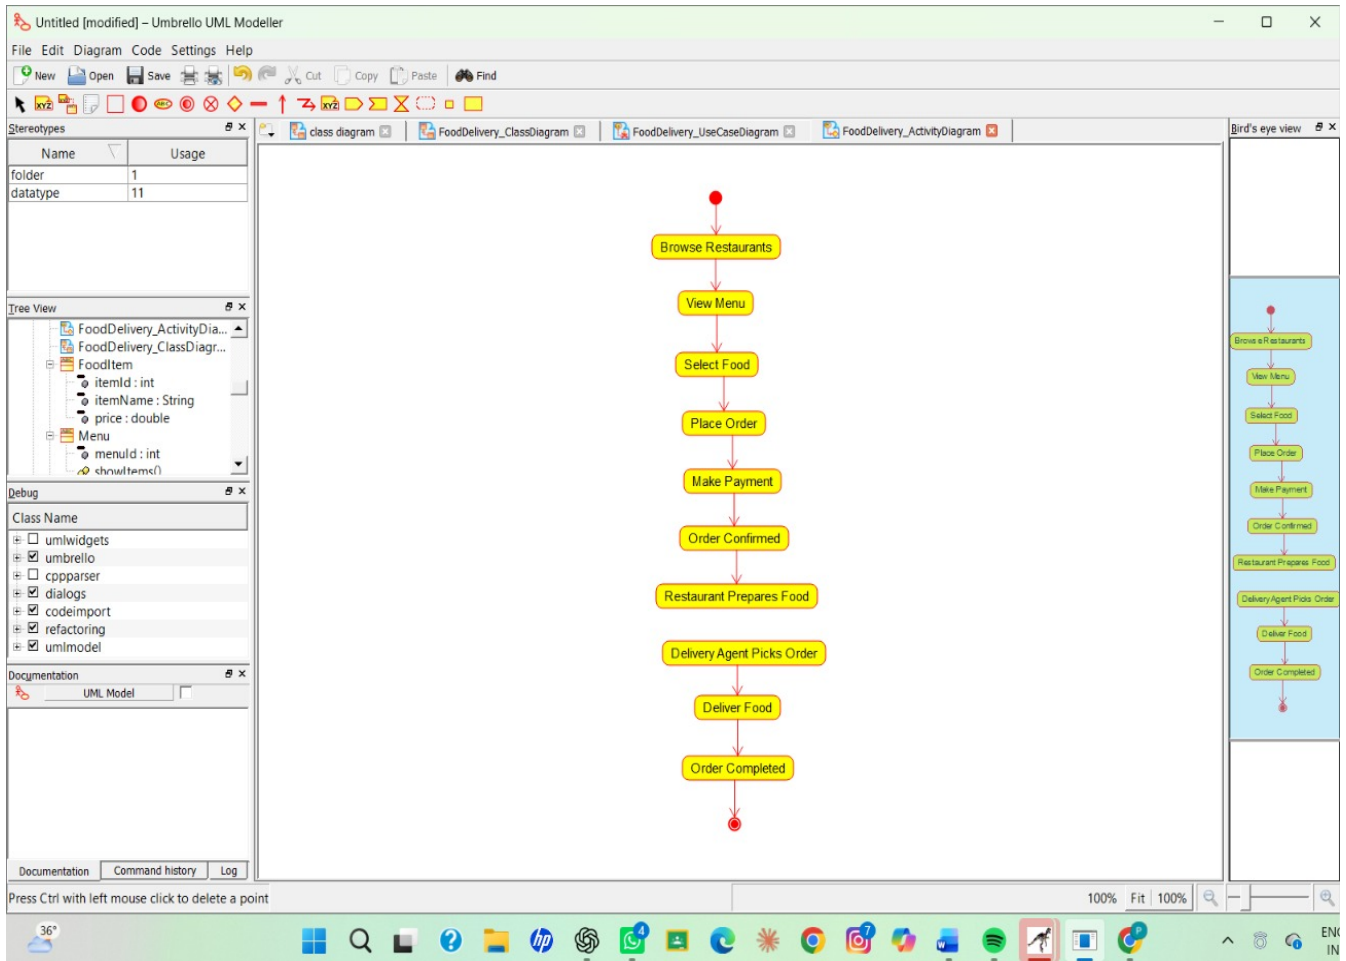

Diagram Summary:

Class Diagram: Represents the main classes such as Customer, Restaurant, Menu, FoodItem, Order, Payment, and DeliveryAgent along with their attributes, methods, and relationships.

Use Case Diagram: Illustrates interactions between the Customer, Restaurant, and Delivery Agent with system functionalities such as browsing restaurants, viewing menus, placing orders, making payments, tracking deliveries, managing menus, and updating delivery status.

Activity Diagram: Describes the workflow from browsing restaurants to successful order completion, including payment, restaurant preparation, delivery assignment, and order completion.

Result: The Class Diagram, Use Case Diagram, and Activity Diagram for the Online Food Delivery System were successfully designed and validated using Umbrello UML Modeller.
