

Online Security Management System – UML Diagrams Report

Aim: To develop the Class Diagram, Use Case Diagram, and Activity Diagram for the Online Security Management System.

System Description:

The Online Security Management System automates campus security operations. It enables the administrator to assign duties, manage duty schedules, approve leave requests, calculate monthly salaries, and generate salary reports. Security staff can view their duty schedules, apply for leave, and view salary details.

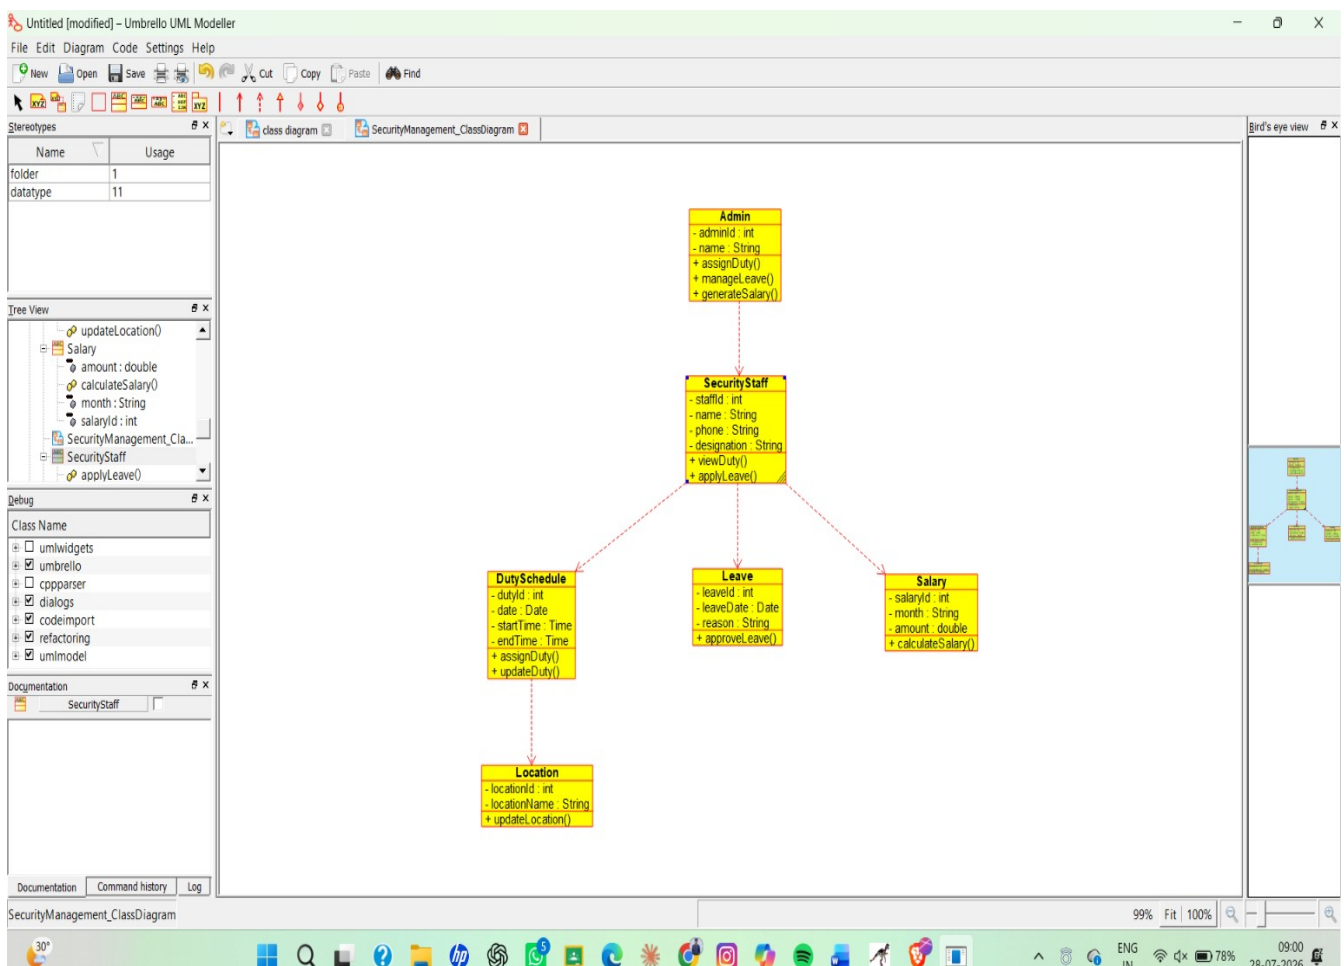

Figure 2: Use Case Diagram

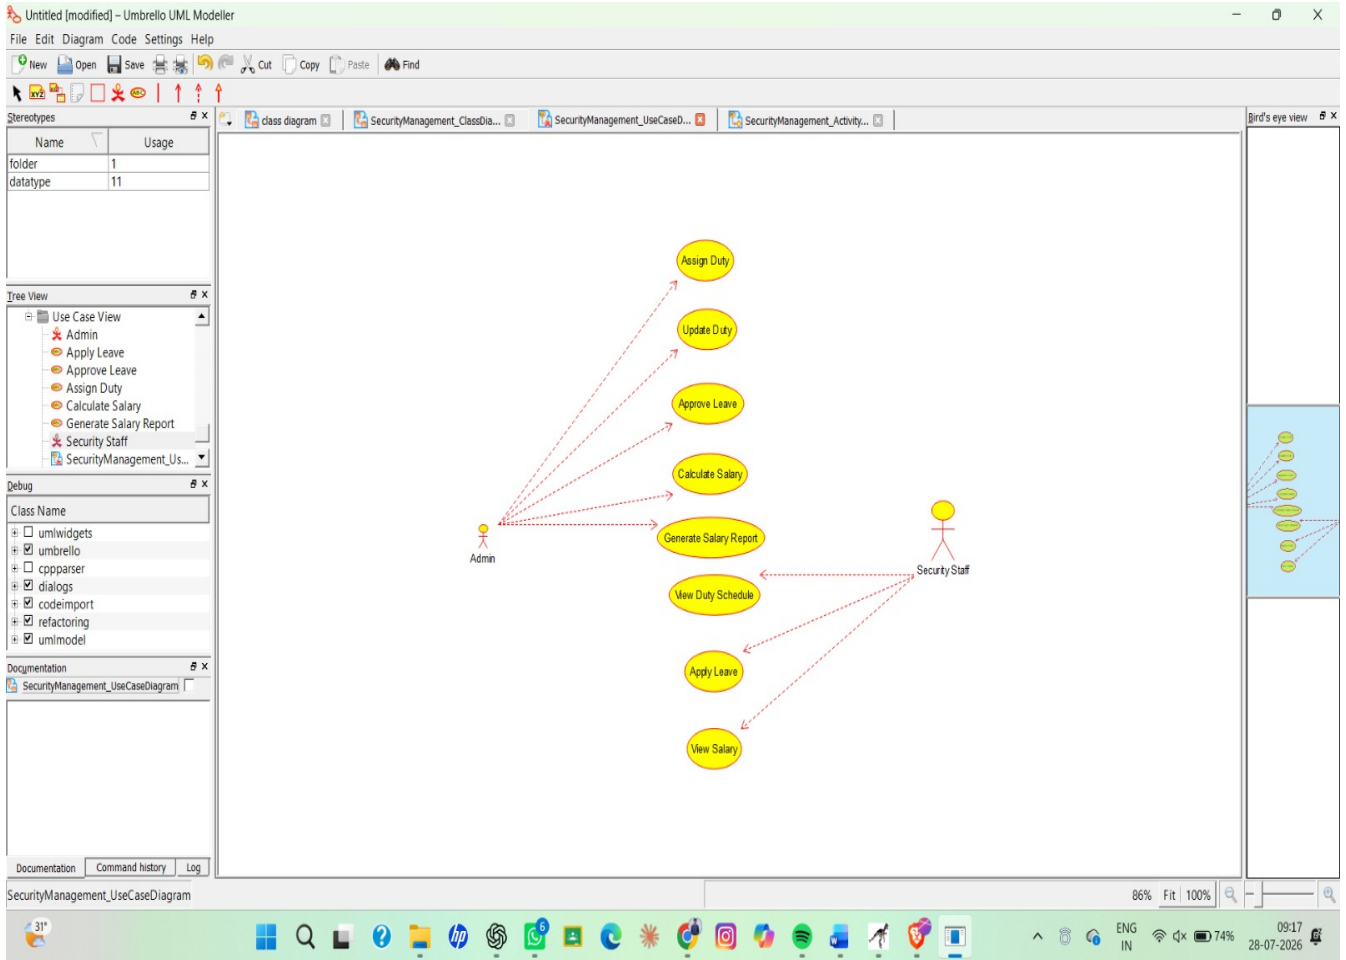

Figure 3: Activity Diagram

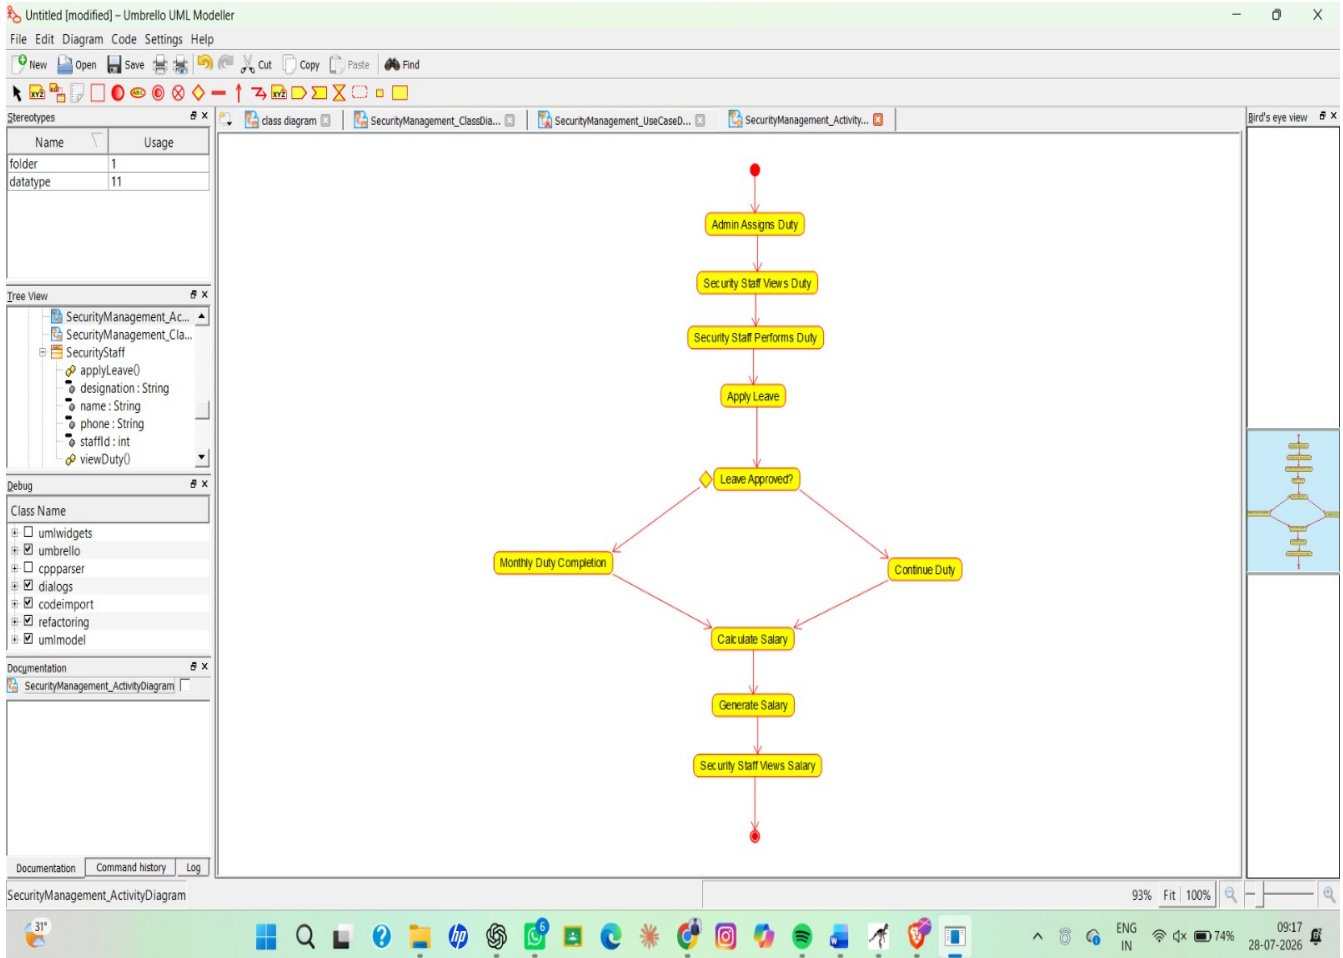

Diagram Summary:

Class Diagram: Shows the relationships between Admin, Security Staff, Duty Schedule, Leave, Salary, and Location with their attributes and methods.

Use Case Diagram: Describes interactions of the Admin and Security Staff with functionalities such as assigning duties, updating duties, approving leave, calculating salaries, generating salary reports, applying leave, viewing duty schedules, and viewing salaries.

Activity Diagram: Illustrates the workflow starting from duty assignment, duty execution, leave processing, salary calculation, salary generation, and salary viewing.

Result: The Class Diagram, Use Case Diagram, and Activity Diagram for the Online Security Management System were successfully designed and validated using Umbrello UML Modeller.
