

EXPERIMENT 12

TASK MANAGEMENT SYSTEM – MoSCoW AND KANO PRIORITIZATION

Aim: To prioritize the requirements of a Task Management System using the MoSCoW and Kano prioritization models in Jira.

Requirements

TMS-1 – User Login and Role Assignment

TMS-2 – Task Creation and Assignment

TMS-3 – Task Prioritization and Deadlines

TMS-4 – Progress Tracking and Reporting

MoSCoW Prioritization

Requirement	MoSCoW	Reason
TMS-1 User Login and Role Assignment	Must Have	Required for secure access and role-based control.
TMS-2 Task Creation and Assignment	Must Have	Core functionality for creating and assigning tasks.
TMS-3 Task Prioritization and Deadlines	Should Have	Important for organizing work, priorities, and schedules.
TMS-4 Progress Tracking and Reporting	Could Have	Useful for monitoring progress and generating reports; can be enhanced later.

Kano Model Prioritization

Requirement	Kano Category	Reason
TMS-1 User Login and Role Assignment	Must-Be	Users expect secure login and appropriate role access.
TMS-2 Task Creation and Assignment	Must-Be	The system is expected to support basic task creation and assignment.
TMS-3 Task Prioritization and Deadlines	Performance	Better prioritization and deadline handling directly improves usefulness.
TMS-4 Progress Tracking and Reporting	Performance	More effective tracking and reporting increases user satisfaction and visibility.

Jira Implementation

1. Create the four requirements as Jira issues under the Task Management System project.
2. Assign the MoSCoW priority to each issue using labels, a custom field, or priority field as configured in Jira.
3. Record the Kano category for each requirement using a label or custom field.
4. Use the Jira backlog/board to review and monitor the prioritized requirements.

Result

The Task Management System requirements were prioritized using both MoSCoW and Kano models. The Jira backlog shows the four requirements with their current workflow status, providing a basis for organized development and requirement tracking.
