

GIT/GITHUB COLLABORATIVE DEVELOPMENT

FORK-AND-PULL REQUEST WORKFLOW

Aim: To demonstrate collaborative development using Git and GitHub through the fork-and-pull request workflow.

Procedure

1. Fork an existing public GitHub repository, such as the sample Spoon-Knife repository.
2. Clone the forked repository to the local machine using Git.
3. Create a separate feature branch for the required change.
4. Modify the project, such as improving the README documentation or adding project information.
5. Commit the changes and push the feature branch to GitHub.
6. Create a pull request from the feature branch to the main branch.
7. Review the pull request and provide feedback on the changes.
8. Respond to feedback by making additional commits to the feature branch when required.
9. After review and approval, merge the pull request into the main branch.

Changes Made

- Improved the project README documentation.
- Added project contribution information.
- Added GitHub workflow documentation.
- Demonstrated collaborative development using a separate feature branch.
- Submitted the changes through a pull request for review.

Collaboration Summary

The work was completed using a fork-and-pull request workflow. A separate feature branch was used to make changes without directly modifying the main branch. The changes were committed, pushed to GitHub, reviewed through a pull request, and updated in response to review feedback.

Pull Request

Pull Request: **Improve README documentation #40850**

Repository: **octocat/Spoon-Knife**

SCREENSHOTS OF COMPLETED WORK

Screenshot 1

Screenshot 2

The screenshot shows a web browser window displaying a GitHub pull request. The browser's address bar shows the URL `github.com/octocat/Spoon-Knife/pull/40850`. The page title is "Improve README documentation #40850". Below the title, a green "Open" button is visible, followed by the text "192511064simats-0607 wants to merge 2 commits into octocat:main from 192511064simats-0607:improve-readme".

Navigation tabs at the top indicate: Conversation (1), Commits (2), Checks (0), and Files changed (1). A status bar on the right shows "+13 -1" with a green progress indicator.

The main content area features a comment from user "192511064simats-0607" posted 37 minutes ago. The comment includes a "Summary" section stating "This pull request improves the README documentation." It also contains sections for "Changes Made" (listing added project contribution information, GitHub workflow documentation, and demonstrated collaborative Git workflow), "Testing" (stating no code functionality was changed), and "Collaboration" (stating changes were developed in a separate feature branch).

On the right side, a sidebar provides additional context: "Reviewers" (No reviews, with a link to "Convert to draft"), "Assignees" (No one assigned), "Labels" (None yet), "Projects" (None yet), "Milestone" (No milestone), and "Development" (a note about merging the pull request to close issues).

The bottom of the image shows a Windows taskbar with various application icons, system status icons (including network, volume, and battery), and a clock showing 10:07 on 11-08-2026.

Screenshot 3

The screenshot shows a web browser window displaying a GitHub pull request. The browser's address bar shows the URL `github.com/octocat/Spoon-Knife/pull/40850/changes`. The page title is "Improve README documentation #40850". The pull request is from the repository `octocat:main` to the branch `192511064simats-0607:improve-readme`. The pull request is open and has 2 commits. The main content area shows the `README.md` file with a diff view. The diff shows changes to the README file, including a new section titled "Project Contribution" and a list of changes. A comment is visible on line 13, asking the author to add a short sentence explaining why using a separate feature branch is useful for collaborative development. The comment is from the user `192511064simats-0607` and was posted 37m ago. The comment text is "Please add a short sentence explaining why using a separate feature branch is useful for collaborative development." The comment has a "Write a reply" button and a "Resolve comment" button. The diff view shows the following changes:

- Line 6: After forking this repository, you can make some changes to the project, and submit [a Pull Request](https://github.com/octocat/Spoon-Knife/pulls) as practice.
- Line 9: - For some more information on how to fork a repository, [check out our guide, "Forking Projects"](<https://guides.github.com/overviews/forking/>). Thanks! :sparkling_heart:
- Line 10: - For some more information on how to fork a repository, [check out our guide, "Forking Projects"](<https://guides.github.com/overviews/forking/>). Thanks! :sparkling_heart:
- Line 11: +
- Line 12: +
- Line 13: + ## Project Contribution
- Line 14: + This contribution demonstrates the GitHub fork-and-pull request workflow.
- Line 15: + ## Changes
- Line 16: + - Improved project documentation
- Line 17: + - Added contribution information
- Line 18: + - Demonstrated collaborative Git workflow
- Line 19: +
- Line 20: + This project demonstrates collaborative development using GitHub.
- Line 21: + Using a separate feature branch allows developers to work independently without affecting the main branch.

Result: The fork-and-pull request workflow was successfully demonstrated using GitHub. The feature branch changes were submitted through a pull request and the collaboration and review process were documented.
